

In this week we gained access to production server of asm.camosun.bc.ca. Walker worked on the functionality of being able to toggle on and off tasks for the menu. Also brought up the reason for slow production with the lack of documentation and comments found within the code. James kept working on the exporting score via email needs SMTP info for the Camosun mailing server. Adam worked on the pop up menus where the after the dates for the course and chapter have been set that they are editable.
